# Subject Index

L = Letter

**A**

ABC transporters, stress resistance and 10 (L), 11 (L)
accessory proteins, foamy viruses 284
*O*-acetylation, *Shigella* O-antigen 18
actin cytoskeleton
  *Salmonella* interactions 151
  viral transport mechanisms 466
  Yop-mediated rearrangements 205
*N*-acyl homoserine lactones (AHL) 101, 103
acylation, *Pseudomonas aeruginosa* lipid A, in cystic fibrosis 247, 250
adenovirus
  E1A, p300/CBP interaction 561
  fiber protein 392, 393
  structural similarity to PRD1 91
  vectors 391, 393
adenylate cyclase, in fungal morphological switching 134
adenylyltransferase (ATase) 173, 447 (L)
adhesins
  *Helicobacter pylori* 326
  laminin-2 binding, in *Mycobacterium leprae* 26
  *Neisseria gonorrhoeae* 539, 541
adhesion (adherence)
  *Candida albicans* 54
  *Helicobacter pylori* 322, 568
  neisserial Opa proteins 258, 260
  *Pseudomonas aeruginosa*, in cystic fibrosis 517
  *Staphylococcus aureus* 341, 343
aerolysin 168
*Aeromonas*, aerolysin 168
aging, mouse model 39, 157 (L)
Agr, penicillin susceptibility and 276
*Agrobacterium tumefaciens*
  Ros 77, 448 (L), 449 (L)
  T-DNA transfer system 352 (L), 354, 357, 362
  T-pilus 361
AIDS
  dementia complex (ADC) 387, 390
  immune response 147
airway epithelial cells, *Pseudomonas aeruginosa* interaction, in cystic fibrosis 516
airway surface liquid, in cystic fibrosis 515
alkyl transfer (AT), in hyperthermophilic Archaea 181
allostery, response-regulator phosphorylation and 153
α-barrel structure, TolC 481
α-toxin, staphylococcal 89
amoebae, *Legionella pneumophila* infection 478
American Society for Microbiology (ASM) 193, 196
  Board of Education and Training (BET) 194
  Public and Scientific Affairs Board (PSAB) 193
  publications 193
amidases, phage 121
animal models 197
  alternative to 336
  atherosclerosis, *Chlamydia pneumoniae* infection 255, 257
  *Caenorhabditis elegans* 142
  HIV infection 426
  *see also* mouse models
anthrax toxin, discovery 199
anti-idiotypes, in vaccine development 492
antibiotic resistance 554
  definition 554
  horizontal gene transfer 129
  measurement 555
  obligate intracellular pathogens 483
  stress resistance and 10 (L), 11 (L)
antibiotics
  export by Gram-negative bacteria 481
  susceptibility tests 555
antibody-dependent enhancement (ADE), dengue virus 74
antigen presentation
  molecules 419
  mycobacterial glycolipids 420, 543 (L)
  viral evasion 416
antigenic variation
  neisserial Opa proteins 260
  phage-mediated, in *Shigella flexneri* 17
  targeting with mimotopes 493
antigens 85 enzyme complex, mycobacterial 438, 441
antimicrobial peptides (AMPs)
  in cystic fibrosis lung disease 247, 250, 515
  in innate host defense 402
antiviral therapy, in HIV central nervous system disease 389, 391
apicomplexan parasites, gliding motility and cell invasion 94, 96
apoptosis
  inhibition, molluscum contagiosum virus 473
  modulation by bacterial pathogens 306
  viral inhibitors 415
aquaporins 33, 104 (L)
Archaea
  C2H2 zinc finger proteins 78
  chromosome replication, nucleoid segregation and cell division 278
  chromosome replication origin 535, 537
  hyperthermophilic, DNA repair 180
asialo-GM1 receptors, *Pseudomonas aeruginosa* adherence 517
asialoglycoprotein receptor (ASGP-R), gonococcal binding 540, 541
ASM *see* American Society for Microbiology
*Aspergillus nidulans*, molecular motors 163
atherosclerosis
  role of *Chlamydia pneumoniae* 255, 257, 541 (L)
  role of human cytomegalovirus 112, 294
  role of viral chemokine receptors 294
ATP-binding cassette (ABC) transporters, stress resistance and 10 (L), 11 (L)
attaching and effacing (AE) lesions 442, 457
autoantibodies, *Helicobacter pylori* Lewis antigens 567
autoimmune disease
  molecular mimicry and 444, 446
  targeting with mimotopes 493
autoinducers (AIs), quorum sensing via 442
autolysins, penicillin-induced killing and 274
autotransporters 459, 529
  evolution 531
  nomenclature 352 (L), 529, 533, 534
  unlinked (two-partner secretion) 530, 533, 534
auxins 298
Avery, Oswald 194
*Azospirillum brasilense*, indole-3-acetic acid production 299

**B**

B cells, EBV infection 185
*Bacillus anthracis* toxin, discovery 199
*Bacillus subtilis*, chromosome partitioning 315
bacterial artificial chromosomes (BAC), herpesviruses 264
bacteriophages
  horizontal gene transfer 129
  host cell lysis 120, 275
  origin and evolution 504
  PRD1, structural similarity to adenovirus 91
  serotype-converting 17
base excision (BE), in hyperthermophilic Archaea 181

BCG (bacille Calmette–Guérin), comparative genomics via microarrays 209
Beijerinck, Martinus Willem 82
Bet accessory protein, foamy viruses 284
β-barrels
  autotransporters 529, 533, 534
  plasticity of transmembrane 89
$\beta_2$-microglobulin, molluscum contagiosum virus protein binding 475
bioinformatics 198, 239
bioremediation 221
biotransformation processes 221
*Bordetella pertussis* toxin, Ptl secretion system 352 (L), 356
*Bradyrhizobium japonicum* 54
BRCA1, pentapeptide scanning mutagenesis 576
'breathing' dynamics, human rhinoviruses (HRV) 252, 254
BSE (bovine spongiform encephalopathy) 6
Bunyaviridae 61
*Burkholderia cepacia* 56

**C**

C2H2 zinc finger proteins 77, 448 (L), 449 (L)
*Caenorhabditis elegans*, host–pathogen interactions 142
CagA, *Helicobacter pylori* 356
calcium efflux, aerolysin-induced 171
*Candida albicans* 201
  adherence to host cells 54
  cell wall maintenance 344
  MAT homologs 4
  morphological switching 138, 302 (L)
capsid proteins, structural similarities 91
capsule, *Cryptococcus neoformans* 547
carbohydrate antigens, bacterial 492
carcinoembryonic antigen-related cellular adhesion molecule (CEACAM) receptors, targeting by Opa proteins 258
Cas, Yop proteins and 205
cathelicidins 404
cationic antimicrobial peptides (CAMPs) in innate host defense 402
*Pseudomonas aeruginosa* resistance to 247, 250
*Caulobacter crescentus*, chromosome partitioning 316
CBP *see* CREB-binding protein
*cco*NOQP/*fix*NOQP operon 542 (L)
CD1 molecules 419, 543 (L)
CD1-restricted T cells 419, 543 (L)
CD18, enteric pathogen uptake and 292, 293
CD46, human herpesvirus 6 (HHV-6) and 436
CD66, targeting by Opa proteins 258
Cdc6, archaeal 280
CEACAM receptors, targeting by Opa proteins 258
cell cycle
  in Archaea 278
  in human cytomegalovirus-infected cells 113
  regulation by viruses 560
cell division
  in Archaea 278
  *see also* meiosis; mitosis
cell entry/invasion
  adenovirus 392, 393
  apicomplexan parasites 94, 96
  cytoplasmic transport of viruses after 468
  enteric bacteria 291, 293, 459
  human cytomegalovirus 111
  human rhinoviruses 253
  *Pseudomonas aeruginosa* in cystic fibrosis 517
  *Salmonella* 151
  *Staphylococcus aureus* 341, 343
  *see also* cell receptors
cell lysis
  penicillin-induced 274
  phage-mediated 120, 275
cell receptors
  adenovirus 391, 393
  aerolysin 168
  arrays, viral 436
  *Clostridium perfringens* enterotoxin 145
  human rhinoviruses 251, 254
  neisserial Opa proteins 258, 260
  *Pseudomonas aeruginosa* in cystic fibrosis 517
cell spreading, integrin-mediated 205
cell transformation, by DNA viruses 560
cell tropism, EBV 185
cell wall
  Gram-positive bacteria, surface proteins 148, 234
  maintenance in fungi 344
  mycobacterial 438
  plant, *Ralstonia solanacearum* signals 487, 489
  staphylococcal, metabolism 274
cell-wall-integrity pathway 344
cellular adhesion molecules
  targeting by Opa proteins 258, 260
  *see also* integrins; intercellular adhesion molecule 1
cellular microbiology 196
central nervous system (CNS), HIV infection 387, 390
cerebrospinal fluid (CSF), HIV infection 387, 390
CFTR, role in *Pseudomonas aeruginosa* susceptibility 514
channels, transmembrane
  formation by pore-forming toxins 89, 169
  MIP family 33, 104 (L)
chaperones
  RNA, IRES-stimulating proteins as 333
  type III substrate-specific 202, 215
chemokine(s)
  antagonist, molluscum contagiosum virus (MC148) 474
  in human cytomegalovirus infection 116
  inhibition/modulation by viruses 414
  receptors
    HIV/SIV differences 429
    viral, role in atherosclerosis 294
  role in atherosclerosis 294
chimpanzee model, HIV infection 426
*Chlamydia*
  antibiotic resistance 483
  modulation of host cell apoptosis 310
*Chlamydia pneumoniae*, role in atherosclerosis 255, 257, 541 (L)
cholera
  suckling mouse model 189
  toxin (CT), in suckling mouse 190
cholesterol-binding toxins 89
chromosome
  replication, in Archaea 278
  replication origin, archaeal 535
  segregation, in prokaryotes 313
circumsporozoite- and TRAP-related protein (CTRP) 94
claudins, *Clostridium perfringens* enterotoxin and 145
*Clostridium perfringens* enterotoxin (CPE) 145
cognate sensors–regulators, *Pseudomonas aeruginosa* 501
colicins, channel formation 89
colonization, *Helicobacter pylori* 321, 568
commensal bacteria, antibiotic resistance 554
comparative genomics
  to identify essential bacterial genes 521
  techniques 396
  via microarrays 209
congenital infections, human cytomegalovirus 111
conjugation, type IV DNA transfer 355
contact-mediated expression, *Ralstonia solanacearum* 487, 489
copper ions, regulation of methane monooxygenases 221
*Coxiella burnetii*, modulation of host cell apoptosis 311
coxsackie–adenovirus receptor (CAR) 391, 393
CPSF, inhibition by NS1A 377
CREB-binding protein (CBP)
  targeting by HPV E6 45
  viral interactions 560
Creutzfeldt–Jakob disease (CJD) 6
cryptococcosis 547
*Cryptococcus neoformans* 54, 201
  morphological switching 140
  polysaccharide capsule 547
CTRP (circumsporozoite- and TRAP-related protein) 94
cyanobacteria
  nitrogen-fixing, in open oceans 68
  PII proteins 177

cyclic AMP (cAMP), in fungal morphological switching 133, 302 (L)
cyclic peptides, T-pilin 361
cystic fibrosis
*Pseudomonas aeruginosa* interaction 247, 250
*Pseudomonas aeruginosa* susceptibility 514
cystic fibrosis transmembrane conductance regulator (CFTR), *Pseudomonas aeruginosa* susceptibility and 514
cytochrome $bc_1$ complex, *Rhodobacter sphaeroides* 105 (L), 106 (L), 107 (L), 493 (L)
cytochrome $c_2$, *Rhodobacter sphaeroides* 105 (L), 106 (L), 107 (L), 493 (L)
cytochrome $cbb_3$ 542 (L)
cytokines
inhibition/modulation by viruses 414
response to enteric bacteria 460
superantigen-induced production 369
viral 413
cytokinesis, fungal motors in 162
cytomegalovirus, human *see* human cytomegalovirus
cytoplasm, mechanisms of virus transport 465
cytoskeleton
organelle transport, in fungi 162
*Salmonella* interactions 151
viral transport mechanisms 465
Yop-mediated rearrangements 205
cytotoxic T lymphocytes (CTLs)
in HIV infection 147
molecular mimicry and 444, 446
viral evasion 415

**D**

*D* gene, phage λ 505
death effector domain (DED) protein, molluscum contagiosum virus (MC159) 473
defensins 404
dengue 74, 265 (L)
hemorrhagic fever (DHF) 74
shock syndrome (DSS) 74
virus, genetic variation 74, 265 (L)
diarrhea
*Clostridium perfringens* enterotoxin and 145
rotavirus-induced, resistance of adult mice 50
diazotrophs, open-ocean 68, 301 (L)
*Dictyostelium discoideum*, *Legionella pneumophila* culture 478
diffusion, cytoplasmic transport by 465
diketopiperazines (DKPs) 103
dimorphism, fungal 201
cAMP signaling in 133, 302 (L)
diphtheria toxin, channel formation 89
DNA
discovery 194
donor, transposon liberation from 268
segregation, in prokaryotes 313
type IV transfer systems 355
DNA damage
repair, in hyperthermophiles 180
spontaneous, in hyperthermophiles 181
DNA microarrays 198
limitations 210
*Mycobacterium tuberculosis* 209
*Plasmodium falciparum* 350
DNA polymerases, archaeal 279
DNA tumor viruses, p300/CBP interaction 560
Dot–Icm system, *Legionella pneumophila* 47, 49, 354
*Drosophila*, Toll pathway 452
drug resistance *see* antibiotic resistance
dyneins
cytoplasmic transport of viruses 466
fungal 162
α-dystroglycan, targeting by *Mycobacterium leprae* 23, 156 (L)

**E**

E protein, lytic phage 125
E1A, adenovirus, p300/CBP interaction 561
E6 protein, HPV, targeting of transcriptional cofactors 45
eIF4F complex, in picornavirus RNA translation 330
eIF4GII 334
encephalitis, HIV 387, 390
endocytosis, fungal motors in 162
endogenous retroviruses, in mouse model of aging 39
endolysins, phage 120
endopeptidases, phage 121
endoplasmic reticulum (ER), aerolysin-induced vacuolation 171
endosomes–lysosomes, CD1 localization 421
endothelial cells, *Staphylococcus aureus* internalization 341
enterotoxins
*Clostridium perfringens* (CPE) 145
staphylococcal (SEs) 371
EnvR/OmpR osmoregulation system 154, 155
epidemiology
antibiotic resistance 554
molecular, viruses 8
epithelial cells
airway, *Pseudomonas aeruginosa* interaction 516
EBV infection 185
gastric, *Helicobacter pylori* adhesion 568
*Staphylococcus aureus* invasion 341, 343
Epstein–Barr virus (EBV) infection 185
ERKs, activation by human cytomegalovirus 113
*Escherichia coli*
chromosome partitioning 316
enterohemorrhagic (EHEC) 442
enteropathogenic (EPEC) 442, 457
genetics 195
genome variation 398
herpesvirus infectious clones 264
horizontal gene transfer 130
locus of enterocyte effacement (LEE) 442, 457
mechanosensitive channels 12 (L)
nitrogen regulation 173
PII protein 173, 447 (L)
quorum sensing 442
eukaryotes
horizontal gene transfer 131
PII proteins 177
evolution
autotransporters 531
bacterial
gene loss in 399
horizontal gene transfer and 128
HIV infection to AIDS 147
virus 8, 92, 504
*see also* phylogenetic analysis
exocytosis, fungal motors in 162

**F**

F-actin, organelle transport, in fungi 162
*fbp* genes, mycobacteria 439
fiber protein, adenovirus 392, 393
fibronectin-binding proteins (FnBP), staphylococcal adherence 341, 343
filamentous hemagglutinins of *Bordetella* (FhaB) 530
flagellar assembly systems, type III secretion systems and 202, 214
*flo11* gene 136
fluorescence microscopy, bacterial DNA segregation 314
foam cells, *Chlamydia pneumoniae* infection and 255, 257
foamy viruses 284
focal adhesions (FAs), Yop proteins and 205
follicle-associated epithelium (FAE), intestinal 291, 459
Fps1p 34
fungi
cAMP signaling in pathogenic 133, 302 (L)
cell wall maintenance 344
cellular role of molecular motors 162
pathogenic, in 21st century 200

**G**

G-protein coupled receptor, HCMV-encoded 294
G proteins
in fungal morphological switching 134
*Salmonella* modulation 151

PTB (polypyrimidine-tract-binding protein), picornavirus IRES interaction 332
Ptl secretion system, *Bordetella pertussis* 352 (L), 356
public health policy, American Society for Microbiology and 193
Puumala virus 63
*Pyrococcus abyssi*, chromosome replication origin 535, 537

**Q**

Qa-1$^b$, molecular mimicry and 444, 446
4-quinolones 102, 103
quorum sensing
in *Escherichia coli* 442
new signal molecules 101, 103
in pathogens and symbionts 226
*Pseudomonas aeruginosa* 55, 101, 103

**R**

*R* genes, phage 120
Rac, modulation by *Salmonella* 151
rafts, lipid, aerolysin association 170
*Ralstonia solanacearum* 486, 489
Ras1p/Ras2p, in morphological switching 134
reaction center (RC), *Rhodobacter sphaeroides* 105 (L), 106 (L), 107 (L), 493 (L)
reactive oxygen intermediates (ROIs), human cytomegalovirus and 112
receptors, cell surface *see* cell receptors
recombination
dengue virus 74
herpesviruses, using overlapping cosmids 262
in phage evolution 505
repeat expansion, Sup35p [*PSI*$^+$] element 1, 3
replication
archaeal 278
foamy viruses 284
origins *see* origins of replication
reservoirs
dengue virus 76
hantaviruses 61
response regulators
protein phosphorylation and activation 153, 155
*Pseudomonas aeruginosa* 498
retinoblastoma protein (pRb), targeting by DNA viruses 560
retroviruses
disintegration reaction 270
non-pathogenic 284
*see also* HIV
reverse-transcriptase polymerase chain reaction (RT-PCR), *Mycobacterium tuberculosis* virulence factors 97
review, peer 198
rhesus macaque models, HIV infection 428
rhinoviruses, human *see* human rhinoviruses
*Rhizobium*
plant symbioses 299
Ros homolog 77
rhizosphere bacteria, indole-3-acetic acid release 298
Rho
modulation by *Salmonella* 151
Yop interactions 205
*Rhodobacter sphaeroides*, photosynthesis 105 (L), 106 (L), 107 (L), 493 (L)
*Richelia*, nitrogen fixation 71
*Rickettsia*
antibiotic resistance 483
modulation of host cell apoptosis 311
RNA
amplification methods, *Mycobacterium tuberculosis* 97, 100
chaperones, IRES-stimulating proteins as 333
signal pathway, type III secretion 214
translation, picornavirus 330
transport, role of fungal motors 165
rodents, hantavirus infections 61
root development, indole-3-acetic acid and 299
Ros protein 77, 448 (L), 449 (L)
rotavirus
murine, immunity in adult mice 50, 52
vaccine development 51, 52
*Rz/Rz1* genes 124

**S**

*S* genes 120
*Saccharomyces cerevisiae*
cell wall maintenance 344
mating-type system 4
MIP channels 34
mitochondrial DNA inheritance 508
molecular motors 162
morphological switching 133, 302 (L)
prion-like [*PSI*$^+$] element 1, 3
*Salmonella*
horizontal gene transfer 130
invasion 151
modulation of host cell apoptosis 306
molecular mimicry and 444, 446
translocation across intestinal epithelium 291, 460
*Salmonella enterica*, genome variation 397
*Salmonella typhimurium*
new and old approaches 53
phosphatase delivery to host cell 29
type III secretion system 214
sampling framework, antibiotic resistance 556
Sar, penicillin susceptibility and 276
scanning linker mutagenesis (SLM) 571
*Schizosaccharomyces pombe*, molecular motors 162
Schwann cells, targeting by *Mycobacterium leprae* 23, 156 (L)
SCOTS (selective capture of transcribed sequences) 98, 100
scrapie agent, murine leukemia virus interaction 39, 157 (L), 158 (L)
secretion systems 529, 533
classification and nomenclature 352 (L), 363, 529
type I 481
*see also* type III secretion systems; type IV secretion systems; type V secretion system
selection, positive, HIV escape mutants 147
selective capture of transcribed sequences (SCOTS) 98, 100
senescence-accelerated mouse prone (SAMP) mouse strains 39
senescence-accelerated mouse resistant (SAMR) mouse strains 39

sensory kinases, *Pseudomonas aeruginosa* 500
Seoul virus 62
serine/threonine (Ser/Thr) protein kinases (STPKs) 238
  bacterial, delivery into host cell 29
  *Mycobacterium tuberculosis* 238
serotype conversion, in *Shigella flexneri* 17
*Serratia marcescens*, *Caenorhabditis elegans* infection 143
severe combined immunodeficient (SCID) mice, murine rotavirus infection 51
sexually transmitted diseases 539, 541
*Shigella*, phosphatase delivery to host cell 29
*Shigella flexneri*
  modulation of host cell apoptosis 306
  O-antigen modification 17
SHIV–macaque model 430
siderophores 231
SigD 31
signal transduction
  EnvZ/OmpR system 154, 155
  human cytomegalovirus-triggered 111
  microbial indole-3-acetic acid 298
  morphological switching in fungi 133, 302 (L)
  PII proteins 172
  Toll receptors 454
signature-tagged mutagenesis (STM) 197, 336
simian immunodeficiency virus (SIV) 147, 387, 390, 428
SIV–HIV chimeric viruses (SHIV) 430
Sin Nombre virus 64
*Sinorhizobium*, Ros homolog 77
skew analysis, *Pyrococcus* chromosome replication origin 535
Slt2p/Mpk1p pathway 344
SMC proteins, in chromosome partitioning 316
smooth muscle cells (SMC), human cytomegalovirus infection 112, 294
sodium
  bioenergetics, and virulence 490
  motive force 490
sodium–protein antiporters 490
*sop/par* genes, in bacterial DNA segregation 314
SopB 31
SopE, in *Salmonella* invasion 151
sortase 148
Spatzle 453
speciation
  bacterial, horizontal gene transfer and 128
  *Yersinia pestis* 297
species
  defined 399
  genome concept 396
sperm, *Neisseria gonorrhoeae* binding 540, 541
*Sphingomonas*, C2H2 zinc finger protein 78
sporozoites, gliding motility and cell invasion 94, 96
SptP 30
  in *Salmonella* invasion 151
spumaviruses 284
squamous epithelial cells, EBV infection 185
Stanley, Wendel M. 84, 195
staphylococcal enterotoxins (SEs) 369
staphylococci
  α-toxin 89
  surface proteins 148
  transferrin receptor 231
*Staphylococcus aureus*
  as intracellular pathogen 341, 343
  mechanism of penicillin-induced killing 274
  stress and antimicrobial resistance 10 (L), 11 (L)
  transferrin receptor 232
*Staphylococcus epidermidis*, transferrin receptor 232
staphyloferrin A and B 232
streptococcal dehydrogenase (SDH) 234
stress, antimicrobial resistance and 10 (L), 11 (L)
*Sulfolobus*, cell cycle 278
Sup35p, prion-like activity 1, 3
superantigens 369
  function 371
  structure 369
surface proteins, Gram-positive bacteria 148, 234
Syc proteins 202, 215
symbionts, nitrogen-fixing, in open oceans 71
symbiosis
  factors 228
  and pathogenesis, common molecular mechanisms 226
  rhizobia–plant, indole-3-acetic acid and 299

**T**

T cells
  activation by superantigens 373
  CD1-restricted 419, 543 (L)
  *see also* cytotoxic T lymphocytes; NKT cells
T-cell receptors (TCR), superantigen interactions 372
T-DNA transfer system, *Agrobacterium tumefaciens* 352 (L), 354, 357, 362
T-pilus, *Agrobacterium tumefaciens* 361
Tas protein, foamy viruses 284
Tc*1/3* 272
TEM-1 β-lactamase, pentapeptide scanning mutagenesis 574
temperature-sensitive (TS) mutations, for identifying essential bacterial genes 521
tetracycline resistance, obligate intracellular bacteria 483
3′-end processing, inhibition by NS1A 378
thrombospondin-related adhesive protein (TRAP) family of proteins 94, 96
Ti plasmid 361
tight junctions, *Clostridium perfringens* enterotoxin and 145
Tn*7*, transposition mechanism 269
tobacco mosaic virus 82
TolC 481
Toll-like receptors (TLRs), mammalian 453
Toll receptor family 452
tonsils, in primary EBV infection 187
toxic shock syndrome toxin-1 (TSST-1) 369
toxin coregulated pilus (TCP), in suckling mouse 190
toxins
  anthrax 199
  pore-forming *see* pore-forming toxins
  *Vibrio cholerae*, in suckling mouse 190
  *see also* enterotoxins; superantigens
*Toxoplasma*, gliding motility and cell invasion 94, 96
Tpk proteins, in fungal morphological switching 135
Tpn, staphylococcal 233
Tra proteins 354
trans-lesion replication (TR), in hyperthermophilic Archaea 181
transcription, in foamy virus infection 287
transcription factors, C2H2 zinc finger bearing 77, 448 (L), 449 (L)
transcriptional adapter motif (TRAM), targeting by viruses 45
transcriptional coactivators (cofactors)
  targeting by HPV E6 45
  viral interactions 560
transferrin
  iron acquisition from 231
  receptor, staphylococcal 231
transgenic mice, *Helicobacter pylori* colonization 324
transglycosylases, phage 121
translation-initiation factors, in picornavirus RNA translation 330
transmissible spongiform encephalopathies (TSEs) *see* prion diseases
transpeptidase, surface protein anchoring 148
transposases, DDE 268
transposons
  horizontal gene transfer 129
  identifying essential bacterial genes 521
  pentapeptide scanning mutagenesis 571
  second-strand processing and liberation from donor DNA 268
TRAP (thrombospondin-related adhesive protein) family of proteins 94, 96
α,α′ trehalose dimycolate (TDM) 439
α,α′ trehalose monomycolate (TMM) 439
*Trichodesmium*, nitrogen fixation 68
tropism
  EBV 185
  *Mycobacterium leprae* 23

tuberculosis 97, 419
new drug/vaccine targets 439, 441
*see also Mycobacterium tuberculosis*
two-component systems
in pathogens and symbionts 228
in penicillin susceptibility 274
protein phosphorylation 238
*Pseudomonas aeruginosa* 498
response regulators 153, 155
stress resistance and 10 (L), 11 (L)
two-partner secretion pathway (unlinked autotransporters) 530, 533, 534
type I secretion system 481
type III secretion systems (TTSS) 214
cytosolic chaperones 202
